

## This is not a faux finish!

Dimensions offers a collection of the finest pure slaked lime products and natural earth pigments which are UV resistant, VOC free, and inhibit mold and mildew.

Dimensions lime plasters are from the highest quality limestone, fired at high temperatures to remove clay and other impurities—this is the very same technique used by the Romans to obtain the lime that was the base for Pompeii's frescoes.

Our plasters and paints, once fully cured, return to their original form of limestone, thus providing a durable surface and high-end aesthetic. Dimensions products have been selected by UNESCO to be used in the restoration of Europe's historical buildings and preservation of its architectural heritage.

These products are now available in the United States exclusively through Dimensions.
